Manager of Landfill Operations (MOLO)
Master the skills that landfill professionals must have to run modern landfills. Gain the technical and administrative skills required to make decisions that exceed the needs of your community, regulators and team. Train with the tools and information needed to achieve a well-run, properly equipped operation as a first-class manager, leader and problem solver. SWANA.org/molo

Transfer Station Management
Are you prepared to respond with confidence and credibility if things go wrong in your transfer station? This course examines the core components of transfer stations — planning, design, operations and management — and trains you to make sound, justifiable decisions even during challenging times. SWANA.org/transfer

Zero Waste Principles & Practices
Take on the challenge to create a plan for achieving zero waste that works for your community. Learn how to infuse zero waste concepts and practices into your programs, communications and community engagement, and access new partners and funding to help you reach your new waste reduction goals. SWANA.org/zerowaste

Managing Composting Programs
Learn how composting can fit into your solid waste management strategy and how to site and equip a basic composting facility. Deep dive into the principles and practices for managing municipal composting programs. Gain a non-technical understanding of the economics of composting and the latest technologies for managing multiple materials. SWANA.org/composting

Managing Integrated Solid Waste Management Systems
Master the planning, operational and administrative skills demanded of an effective ISWM system manager. Examine system components individually and how they work together to treat, process and dispose of multiple collected materials — from landfilling to recycling to waste conversion. SWANA.org/iswms

Household Hazardous Waste & CESQG Collection Operations
Are you doing all you can to protect yourself and the people you serve by minimizing their exposure to household hazardous waste? Taught by HHW professionals with operational experience, this course helps you maintain safe operations in keeping with industry safety and best management practices. SWANA.org/hhwcesqg

Managing MSW Collection Systems
Tackle the challenges of solid waste collection. This course equips collection system professionals with tools for designing and delivering services that account for customers’ specific characteristics and waste generation rates. Learn how to develop a plan that factors in local and regional conditions, financial considerations, and a workable implementation schedule. SWANA.org/mswcollection
